Put "Prevent keyboard form submission" to OFF

Wait 30 seconds (important) and power down

Remove the USB-drive and power on

Home selection box appears, choose SystemView

Check if you can enter the SystemView app settings and verify that the "Prevent keyboard form submission" setting in the Advanced menu is "ON".

When you cannot access the SystemView app settings screen follow the steps on next page.

## Important setting change after SystemView app installation

### Situation:

When trying to enter the SystemView app settings, the tablet does not take you there but will show the selection screen between Launcher and SystemView page.

### Solution:

When this happens then the "Prevent keyboard form submission" setting in the Advanced menu is "ON". This needs to be set in the "OFF" position every time the SystemView app is (re)installed.

Follow the next steps precisely to adjust this setting:

Power on the tablet

Go to Launcher3

Go to Settings/Display

Select the box "SystemUI Gestures"

Go "back" and choose "Apps"

Choose "SystemView"

Choose "Storage" and press "Clear Data" confirm with "OK"

Swipe up from bottom of the screen and press the circle

Choose "SystemView" to open the SystemView app

Press 3 dots at the top right and choose "Settings"

Password 345710 to enter the settings

Go to "Advanced"

Put "Prevent keyboard form submission" to OFF

Wait 30 seconds (important) and swipe up from bottom of the screen and press the circle

Choose "Launcher3"

Go to Settings/Display

Uncheck the box "SystemUI Gestures"

Wait 30 seconds and power down

Then power on again and check if the issue is solved.

When you still cannot enter SystemView app settings then you might did not wait 30 seconds before returning. The changed setting is not stored. Execute the procedure again.
